

## RED DOT STUDY DAY – 20TH SEPTEMBER 2014

### COURSE DETAILS:

Red dot systems have been used nation-wide for many years. They allow radiographers to highlight abnormalities to referrers in a timely fashion, ideal when working in A&E departments.

This course intends to provide newly qualified and student Radiographers with essential skills and methods to help identify even subtle abnormalities. The course will cover the limbs, neck and face and chest x-rays in the trauma setting.

Each lecture will be delivered by one of our highly experienced Advanced Practitioners or by Consultant Radiologists in a comfortable and friendly environment.

Workshops will follow key subjects.
